Problem Statement – Key Points

- Many organizations face difficulties in **managing service requests efficiently**.
- Employees often experience **delays in resolving IT support issues, system errors, or service complaints**.
- Service requests are sometimes handled through **manual processes such as emails, phone calls, or spreadsheets**.
- Due to manual handling, it becomes **difficult to track the status of requests**.
- There is often **poor communication between departments**, which increases resolution time.
- Users do not receive **proper updates about the progress of their requests**.
- These issues lead to **reduced productivity and user dissatisfaction**.
- Therefore, there is a need for a **centralized system to manage and track service requests effectively**.
- The project aims to develop a **ServiceNow-based solution** to automate service request management.
- The solution will help to **improve efficiency, provide faster resolution, and enhance user experience**.
