Customer Journey Map

Stages Covered:

- **Issue Identification**
  The journey begins when a user experiences a problem such as a system error, IT issue, or service-related request that requires assistance.
- **Login to Service Portal**
  The user logs into the ServiceNow portal to access the service request management system.
- **Service Request Submission**
  The user creates a service request by filling in details such as issue description, category, and priority. The system then generates a ticket for the request.
- **Request Processing**
  The ServiceNow system records the request and automatically assigns it to the appropriate support team or department.
- **Issue Resolution**
  The support team reviews the ticket, analyzes the issue, and performs the necessary actions to resolve the problem.
- **Status Updates & Notifications**
  The system updates the ticket status and sends notifications to the user regarding the progress of the request.
- **Ticket Closure**
  Once the issue is resolved, the ticket is marked as closed and the user receives confirmation of the resolution.
