Solution Requirements

Functional Requirements

FR No	Epic	Description
FR-1	User Request Management	Allow users to create and submit service requests through the ServiceNow portal.
FR-2	Ticket Management	Automatically generate tickets when a request is submitted and store request details.
FR-3	Request Tracking	Enable users to track the status of their service requests.
FR-4	Issue Resolution	Allow support teams to view, assign, and resolve service tickets.
FR-5	Notification System	Send automatic notifications and status updates to users regarding their requests.
FR-6	Reporting	Provide dashboards and reports to monitor service requests and resolution performance.

Non-Functional Requirements

NFR-1: Usability

The system should provide a **simple and user-friendly interface** so that users can easily submit and track service requests without technical knowledge. Navigation should be clear and forms should be easy to understand.

Examples:

- Simple request submission form
- Easy ticket tracking interface
- User-friendly dashboard

NFR-2: Security

The system must ensure that **only authorized users can access certain data**. Sensitive information related to service requests and user details must be protected using proper authentication and role-based access.

Examples:

- Only administrators can modify system settings
- Support team can access assigned tickets only

- Users can view only their own requests

NFR-3: Reliability

The system should work **accurately and consistently** without failures. All service requests should be processed correctly and ticket updates should reflect the current status.

Examples:

- Accurate ticket status updates
- No duplicate ticket creation
- Reliable request handling

NFR-4: Performance

The system should respond **quickly to user actions** and handle multiple service requests without delays.

Examples:

- Fast ticket creation
- Quick loading of dashboards
- Fast request search and filtering

NFR-5: Scalability

The system should be able to **handle increasing numbers of users and service requests** without affecting system performance.

Examples:

- Support more departments in the future
- Handle large numbers of service tickets
- Expand features when required

NFR-6: Availability

The system should be **available whenever users need support services**, ensuring minimal downtime.

Examples:

- 24/7 access to the ServiceNow portal
- Continuous ticket tracking availability
- Automatic data backup and recovery
